

ACE GLASS

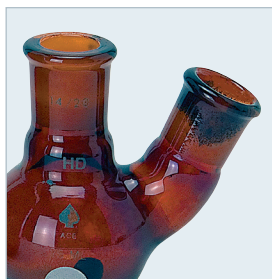

COATED GLASSWARE

Ace Glass offers many of our existing glassware vessels in an amber coated version. Flasks, Pressure Vessels, Bottles, and many other items listed in our catalog can be amber coated upon request. The coating is a proprietary process and yields excellent UV protection characteristics. If you need help choosing between clear and amber coated glass, contact us today for help.

Why Amber Coat Your Glassware:

- Amber coating reduces the photo oxidation effects of sunlight and UV radiation.
- Amber coating reduces the transmission of energetic blue light wavelengths.
- Amber coating protects while affording transparency.

Amber coating is applied to the outside surface only, preventing contamination of the vessel's contents.

AMBER

Special request?

Ace Glass can coat virtually any piece of glassware.

ACE GLASS

COATED GLASSWARE

Epoxy Coating:

- Will greatly reduce the risk of breakage due to surface scratches, particularly in pressure application glassware such as pressure reactors, vessels and chromatography columns.
- More chemically resistant than plastic coating.
- Able to withstand a higher temperature (150°C) than plastic coating (120°C).

Plastic Coating:

- When compared to standard glass vessels, plastic coating improves slip-resistance by lab personnel.
- May help to contain fluids and fragments in the event of accidental breakage.
- Ideal for flasks, bottles, rotary evaporator glassware, etc.
