

PRODUCT DATA SHEET

Ready-to-Screen Tissue BLOTSTM
Single Tissue Blot - Single Species

Catalog #:	TB72			
Lot #:				
Components:	Protein blot of Tumor Human Liver Single Tissue sample arranged as follows:			
	Lane 1 Protein Marker* Lane 2 Human Liver (Tumor)	211,806	Myosin	
		121,020	β-galactosidase	
		100,216	Bovine Serum Albumin	
		54,395	Ovalbumin	
		38,708 29,806	Carbonic Anhydrase Soybean Trypsin Inhibitor	
		20,040	Lysozyme	
Size:	1 Blot	7,331	Aprotinin	
Storage Condition:	4° C	* Lot #: 300002325-BR		

Methods Involved: The proteins were isolated from tumor human liver tissue by preparing a tissue homogenate in the presence of protease inhibitors. Protein sample (50μg) from tumor human liver tissue, solubilized in SDS-lysis buffer was electrophoresed in a 10 well, 4-20% SDS-polyacrylamide gradient gel, followed by electroblotting on PVDF membrane.

<u>Quality Control:</u> Proteins isolated from each lot were run on 4-20% gel and stained with G-Biosciences <u>RapidStain</u>™ to check for its quality. Actin antibody was used to test the separation and transfer of protein from each lot.

<u>Instructions for Use</u>: Remove the blot from the pouch and wash with an appropriate buffer (1X TBST or PBST) 1-2 times. Block the membrane with a protein blocking agent; e.g., G-Biosciences NAP^{TM} -Blocker or BLOT- $QuickBlocker^{\mathsf{TM}}$, and incubate with the primary and secondary antibodies diluted in blocking solution, following the standard protocol. Develop the blot with chemiluminescent or chromogenic detection reagents for the detection of the specific protein.
