

Corning® Specialty Media and Supplements Product Portfolio

Corning offers a broad portfolio of Specialty Media and Supplements to meet the need of researchers and those requiring specialty and custom options for scale-up requirements. The variety of specialized media covers those who require serum-free and low-protein products, and to more specialized products such as for insect cell culture and monoclonal antibody production.

Corning specialty media and supplements are developed and commercialized for the optimum cultivation of specific cell types. Our product line offers several defined, serum-free media that offer numerous advantages over the use of serum, including reduced foaming, the elimination of exogenous agents, easier downstream processing.
