Secure fit.
Without feeling tight.

3M | Science. Applied to Life.™

The SecureFit™ SF400 Series eyewear features soft adjustable nose pads, dual injected temples, and proprietary 3M™ Pressure Diffusion Temple Technology to help diffuse pressure over the ear. This enhances frame comfort without compromising the security of fit across a diverse workforce.

They offer a more comfortable and personal fit than old-fashioned "one-size-fits-all" glasses that are rigid and unyielding in design. The snug fit also keeps the glasses securely in place as the wearer looks up and down or side to side, eliminating the need for frequent repositioning due to head movement. Additionally, the design helps eliminate the expense of stocking multiple frame sizes at jobsites to accommodate different users. Anti-fogging properties help maintain visibility and reduce the need to remove glasses to wipe away moisture from the lenses. All lenses offer 99.9% UV protection.

Scotchgard™ Anti-Fog Coating Technology brings higher performance to safety eyewear.

3M Science. Applied to Life.™

The facts are clear:

- Scotchgard™ Anti-Fog Coating lasts longer than traditional anti-fog coatings,* helping to increase eyewear performance in wet and steamy environments

- Workers may enjoy reliable, clearer sight longer, because the coating, with its active ingredient, is bonded to the lens

- The coating retains its effectiveness for at least 25 washings, allowing workers to wear their eyewear longer

- The coating can be disinfected with diluted bleach soaking or alcohol wipes without losing its anti-fog performance

- Workers can feel confident wearing Scotchgard™ Anti-Fog coated eyewear because it meets the requirements of ANSI Z87.1 and CSA Z94.3

Advantage® 1000 Facepieces, MSA

- Wraparound flexible lens that offers excellent fit and comfort with increased vision
- Weighs 40% less than conventional full-face piece respirators
- Constructed of super-soft Hycar™ rubber that provides the feel and comfort of silicone but has a better permeation resistance
- Unique inturned lip seal that provides exceptional seal against a wide range of face contours and with suspension strap
- Distinctive, flexible urethane lense that is integrally bonded to the facepiece, eliminating the need for rigid lens retainers that can cause unwanted pressure points
- Speaking diaphragm for clear, short range communication
- Nosecup reduces lense fogging in low temperatures or high-humidity conditions

Tychem® Hoods, Bullard®

- Simple, effective, and economical options for respiratory protection
- Covers entire head, face, and neck to provide splash and overspray protection
- Neck cuff design maintains positive pressure inside the hood by inflating the inner collar to provide a snug, comfortable fit and continuous airflow
- Wide-angle lens offers large field of vision while accommodating beards, prescription eyeglasses, or safety glasses
- Lighter and more comfortable than tight-fitting full facepiece respirators
- Durable enough to reuse, yet economical enough to discard after each use
- Approved for NIOSH for use in Type-C applications

Microflex® 93-260 Thinnest Chemical Resistant Disposable Glove

Nitrile & Neopene extended cuff

Ansell

The glove's unique, three-layer construction features a soft interior specifically designed to enable easy donning and doffing. Its flexible middle layer delivers maximum protection against acids and bases, while the durable exterior delivers maximum protection against organic solvents. Because the glove's tough exterior stands up longer to demanding physical and chemical conditions, workers may change gloves less frequently resulting in enhanced productivity.

Microflex® 93-260 Gloves are suitable for applications in Blending, compounding materials; Handling aerospace equipment and parts; Handling of painting tools including spray guns and robots; Handling unexpected leaks, spills, or other releases; Maintenance and equipment clean up; Mounting and dismantling, assembly; Petrochemicals processing; Routine and experimental testing; Sample taking and lab processing; Transferring liquid and solids.

Silicone free, textured fingers, 0.65 AQL, 7.8 mil palm, 11.8 mil fingers, 11.8″ length.

A Proprietary Glove Mold for Natural Hand Movement

CardinalHealth
Essential to care™

Cardinal Health™ Cleanroom Gloves combine innovation with state-of-the-art technology to help provide protection, performance and expertise when you need it most. In addition, wearer comfort is a top priority.

Taking wearer comfort into consideration, Cardinal Health developed a proprietary glove mold with performance in mind using an independent thumb feature that replicates the anatomical position of the resting hand. The thumb on the Cardinal Health™ Glove Mold is prominent and positioned away from, or in front of, the finger plane to allow for natural movement in the fingers, thumb and palm.

Independent study:

In order to demonstrate the benefit of this proprietary glove mold feature, Cardinal Health sponsored an independent study through a third-party lab comparing samples produced on two different glove molds — one with an independent thumb feature and the other without. The study simulated the flexion (i.e. movement towards the palm) and extension (i.e. movement away from the palm) of the thumb on an artificial hand, measuring the force required to flex and extend the thumb.

The results of the study demonstrated that the samples featuring the independent thumb required less force for similar displacements of the thumb than those without an independent thumb feature.[1]

From protection to performance, we have you covered.

DUPONT™ TYCHEM® 2000 SFR PROTECTIVE COVERALLS

Why choose between flame resistance and chemical protection when you can have both?

Tychem® 2000 SFR coveralls provide an effective barrier against a range of inorganic acids and bases as well as industrial cleaning chemicals and particles.

They also provide secondary flame resistance when worn over primary FR garments like those made with DuPont™ Nomex®. In the event that a flash fire occurs, they won't ignite and won't contribute additional burn injury if appropriate flame-resistant personal protective equipment is worn beneath.

They're a dependable choice for keeping workers safe from both chemical and flash-fire threats.

Fire Threats Have Met Their Match.

DuPont™ Tychem® 6000 FR (formerly ThermoPro) offers the trusted chemical protection of Tychem® and the thermal/arc protection of DuPont™ Nomex® in a single-layer garment. Triple hazard protection from liquid-chemical splash, flash fire, and electric arc. Provides at least eight hours breakthrough protection against 17 of the 21 standard ASTM F1001 chemicals and at least 30 minutes of protection for more than 180 chemical challenges including chemical warfare agents. Typical applications and industries include clandestine lab investigation, industrial chemical processing plants, and laboratories.

Available in a variety of styles, including aprons or coveralls, in both orange and gray.
