The ChemStudio™ Product Family

With 50 years of experience in imaging, the creators of the UVP ChemStudio Imaging Systems, are the trusted experts in chemiluminescence and gel imaging applications.

No matter what your preferred method of western blotting is, the UVP ChemStudio Series features the highest sensitivity in gel analysis available. Fluorescent western blotting is the preferred method for quantitative comparisons between protein samples and for detection of multiple proteins. However, the ChemStudio and ChemStudio PLUS systems were built with flexibility in mind, providing RGB detection as standard with optional IR upgrade. Whatever your preferred research method, the UVP ChemStudio product family was built to streamline your protocol from detection to analysis, providing the most accurate quantitation of data for an unlimited range of applications.

The UVP ChemStudio product family features the newest technology, a brand new software interface and top-of-the-line camera options, which guarantees a wider dynamic range of imaging than ever before. With a Studio in your lab, your research is unlimited.

Next Generation Gel and Blot Imagers

UVP ChemStudio PLUS

UVP ChemStudio Imaging Systems

A studio for every imaging need you can imagine.

The creators behind the UVP ChemStudio imaging systems are renowned for delivering advanced solutions to genomic and proteomic applications. UVP ChemStudio imagers offer high-resolution and sensitive imaging of western blots, fluorescent westerns, protein blots, DNA gels, protein gels, blue light gels, colony plates, and plants. They also work with an unlimited range of excitable stains and dyes.

All imagers run the powerful VisionWorks® Software, full package image capture, enhancement functions and analysis software. Application-based icons for automation, which are included in the software package, offer one-touch capture. The software allows for creating custom icons and workflows based on users' needs.

The UVP ChemStudio guarantees top image quality and an optimized range of high performance features. Whether a basic model or the most advanced, every platform offers flexible modules for light sources, cameras, and optics. With its high resolution cameras, deep ambient temperature cooling, high dynamics and excitation ranges from 400 to 800 nm, this series introduces a new benchmark that goes far beyond publication-quality images.

UVP ChemStudio

UVP ChemStudio *touch*

A Studio to Capture all your Imaging Needs

Image quality is the top priority

- **Performance:** Images of the highest quality, with an 8 MP camera, deep cooling and efficient photon-to-signal conversion.
- **Sensitive:** Wide aperture lens optics capture more light in low-light applications. Signals come faster and are stronger.
- **Customized:** User-controlled image enhancement tools to optimize images, using binning, display control, background subtraction, inversion, dark frame correction, noise removal, and many more functions.

Unlimited application possibilities

- **Versatile:** Ideal for imaging and documentation of gels, western blots, colorimetry, fluorescent westerns, colony plates, plants, IR dyes, and a wide range of fluorescent dyes. Excitation in a range of 400–800 nm.
- **Modular:** Modules for multiplexing, with the option of upgrades that can be carried out in the field.
- **Free Choice:** Various UV wavelengths, white or blue LED transilluminator. Choice of camera to match needs of specific applications, both high-performance options with high resolution and sensitivity.
- **Flexible:** Application-based icons for commonly used applications provide one-touch capture. Templates and macros for creating custom one-touch workflows.

Data integrity

- **Powerful:** Numerous features for image enhancement and data analysis.
- **Uncompromised:** Unmodified raw data. Users have the choice of applying image enhancement tools.
- **Reproducible:** Calculation of accurate concentration results, including the calibration standard.

Designed by researchers for researchers

- **Compact:** Small footprint and compact form maximize the use of laboratory bench space.
- **Unrivaled:** Integrated touch-screen computer.
- **Extensive:** A wide illuminated imaging area for simultaneous imaging of multiple gels and blots.
- **Ergonomic:** Thin-Line Transilluminator in a slide-out tray for easy prep.
- **Safe:** UV protection shield protects those doing prep work over the transilluminator.
- **Practical:** Fold-down door minimizes benchtop interferences.

Versatile for All Your Application Needs

Supports a wide range of applications: chemiluminescence, colorimetry and fluorescence.

Supporting an unlimited range of applications

The UVP ChemStudio Systems are built to image DNA gels, protein gels, blue/white gels, plants, colorimetrics, and colony plates. They can also be used for imaging chemiluminescent western blots, fluorescent western blots and NIR. All imagers can be upgraded with various lighting options and accessories for expanded application capabilities. The UVP ChemStudio models are also available as a PC controlled version for laboratories with specific computers or IT restrictions.

Application-based automation and powerful data analysis – all in one stand-alone package

The VisionWorks® Software is a powerful platform. It features automated image capture, enhancement functions and extended analysis tools – all in one package. This software works with both stand-alone and external computer versions of the Studio series imagers.

This unique ability expands the tools available right on the benchtop when using the stand-alone platform. For those users who prefer to perform analysis on an external computer, all imagers include unlimited copies of the software for external use. Laboratory workflows are easy to automate and application-based icons are included for commonly used experiments. Customized application icons can be created for total workflow solutions, applications creating using macros facilitate one-touch workflows.

Expand your range of applications with modular lighting options

With the addition of accessories and emission filters, the UVP ChemStudio series imagers can perform an even wider range of applications. Overhead white, green, red and blue LEDs come as standard in the series.

Furthermore, overhead NIR laser modules are available that can be upgraded in the field. These allow for a range of multiplex lighting for IR1, and IR2.

Revolutionary Thin-Line Transilluminator

All imagers are available as a package, which includes a 302nm, UV Thin-Line Transilluminator. The UV Thin-Line Transilluminator uses innovative long-life UV tubes, practically eliminating service requirements. Instant-on functionality reduces warm-up time to almost zero.

An optional UVP Visi-Blue™ LED Transilluminator is available. It additionally supports blue excitation applications, including GelGreen™ and SYBR® Green (460–470 nm). A blue LED transilluminator represents the safest option for your lab, with no risk of DNA damage or photo-nicking. It is also useful when DNA samples must be used for additional procedures that are performed after the imaging workflow. As an

economical alternative to blue-light applications, a UVP Visi-Blue™ Converter Plate can be used with the Thin-Line Transilluminator to convert UV to blue.

For Coomassie blue, silver stains, and other trans white-light applications, the optional UVP Visi-White™ LED Transilluminator is recommended. An economical solution to additional white-light applications is available by simply pairing the UVP Visi-White™ Converter Plate with the UV Thin-Line Transilluminator.

With the help of a UVP eLITE Light Source, which uses Xenon light engine technology, uniform and high-intensity light across the full range of brilliant multispectral excitation can be produced for a variety of fluorescent dyes.

A New Standard for Image Quality and Data Integrity

High performance gets the best results - guaranteed excellent image resolution, sensitivity and data integrity.

High resolution

The UVP ChemStudio includes a high-performance 8 MP chemi imaging camera. Multiple hardware and lighting options are configurable with the highly versatile UVP ChemStudio Imaging Systems.

Extreme light sensitivity

Two camera options are available for a range of applications requiring maximum light sensitivity, a wider dynamic range or supreme quantum efficiency into the IR range. All cameras utilize a wide aperture.

Clean images

Cameras are deeply cooled to deliver clean images with no noise and a low background. Additionally, UVP ChemStudios provide user-controlled software tools to apply background subtraction and noise removal.

Data integrity is essential for accurate and reproducible results. The VisionWorks® Software tools provide users with the freedom to apply image enhancement and analysis features when needed. They create uncompromised raw data and preserve the true data, promising the highest quantitative value. The UVP ChemStudio series imagers are designed with an uncompromising focus on high-quality imagery, ensuring that they can bring the most value to your research.

An Enhanced Benchtop Experience

Compact design, small footprint, a large integrated touch-screen computer and several ergonomic features – the UVP ChemStudio design maximizes space and user comfort.

The UVP ChemStudio touch provides a seamless, efficient imaging experience

An integrated 13.3 inch, wide touch-screen computer allows for the clear visualization in the faint bands and the fine details of images. Users can multitask easier than ever before on the wide screen, as they flip between open windows and files. Large and visible icons on the software interface increase accessibility, ensuring an improved and simple workflow. The computer also offers a 500 GB hard drive for storing large amounts of images, application presets and data. Seven USB ports make it possible to attach a keyboard, mouse, and other accessories, adding to the unit's user-friendliness. A stylus is included for simple and precise touch-screen control.

Designed for ease of use and convenience

With a small footprint and fold-down door, the UVP ChemStudio maximizes the use of the often limited laboratory bench space and removes benchtop interference. There when you need it for performing gel excision or procedures over the transilluminator surface, the low-profile transilluminator sits on a slide-out tray. All lighting and controls are software automated and are right at your fingertips. A software controlled five-position filter wheel, in a slide-out tray, allows for simple changeover, to various emission wavelengths.

Users are alerted to the presence of UV, by a bright red "UV On" indicator light. A user-defined, software controlled UV shut-off timer is, activated after a set period of inactivity. A UV protection shield is also provided with the system to allow safe and convenient pre-imaging procedures on the Transilluminator.

UVP ChemStudio PLUS Imaging Systems

Image larger samples using the ChemStudio PLUS models.

The UVP ChemStudio PLUS imaging systems are essential to laboratories performing genomic and proteomic applications with larger sample sizes. The systems are customized for high resolution and sensitive imaging of western blots, fluorescent westerns, protein blots, DNA gels, protein gels, blue light gels, plants, colony plates, TLC plates, and an unlimited range of excitable stains and dyes.

Gel and Blot imaging is enhanced, with a large 15.6", integrated touch-screen computer, a unique Slide2Hide door, and a Thin-Line Transilluminator, with a large 25 x 26 cm illuminated area.

The UVP ChemStudio PLUS *touch* is a touch-screen operated system. This stand-alone system is also available as a PC-controlled version on the UVP ChemStudio PLUS. All imagers run with the powerful VisionWorks® Software, full package image capture, enhancement functions, and analysis software. The software is well suited to creating custom icons and workflows based on users' needs.

With all of these advanced features in one imaging system, the UVP ChemStudio PLUS guarantees top image quality and data accuracy, elevating your research to the next level.

UVP ChemStudio PLUS UVP ChemStudio PLUS *touch*

Setting the Standard in Gel and Blot Analysis

Image quality is the top priority

- **Performance:** Images of the highest quality, with an 8 MP camera, deep cooling, and efficient photon-to-signal conversion.
- **Sensitive:** Wide aperture lens optics capture more light in low-light applications. Signals come faster and are stronger.
- **Customized:** User-controlled image enhancement tools to optimize images, using binning, display control, background subtraction, inversion, dark frame correction, noise removal and many more functions.

Unlimited application possibilities

- **Versatile:** Ideal for imaging and documentation of gels, western blots, colorimetry, fluorescent westerns, colony plates, plants, IR dyes and a wide range of fluorescent dyes. Excitation in a range of 250–800 nm.
- **Modular:** Modules for multiplexing, with the option of upgrades that can be carried out in the field.
- **Free Choice:** Various UV wavelengths, blue or white LED transilluminator.
- **Flexible:** Application-based icons for commonly used functions provide one-touch capture. Templates and macros for creating custom one-touch workflows.

Data Integrity

- **Powerful:** Numerous features for image enhancement and data analysis.
- **Uncompromised:** Unmodified raw data. Users have the choice of applying image enhancement tools.
- **Reproducible:** Calculation of accurate concentration results, including the calibration standard.

Designed by researchers for researchers

- **Compact:** Small footprint to maximize the use of laboratory bench space.
- **Unrivaled:** Integrated 15.6 inch touch-screen computer.
- **Extensive:** A large wide illuminated imaging area for simultaneous imaging of multiple gels and blots.
- **Ergonomic:** Thin-Line Transilluminator in a slide-out tray for easy prep.
- **Safe:** Integrated pull-down UV protection shield protects those doing prep work over the transilluminator.
- **Practical:** "Slide2Hide" door minimizes benchtop interferences.

Optimized Work Flows and Convenience

Multitasking, efficiency and ease-of-use is ensured, with the large touch-screen interface, the Thin-Line Transilluminator and the Slide2Hide door.

The Thin-Line Transilluminator is slim and sits on a slide-out tray, for simple preparative work on gels. Thin, long-life UV bulb technology delivers high-intensity and uniform transillumination, for a large imaging area of 25 x 26 cm. This is ideal for imaging multiple gels, and several colony plates of various sizes.

The UVP ChemStudio PLUS *touch* has the largest, 15.6" integrated touch-screen computer, to provide a conveniently wide viewing area. Multiple gel images can be viewed, with clear visuals of faint bands. The interface contains ample space for multi-tasking on several windows and programs. Large and visible application icons on the VisionWorks *touch* Software, increase accessibility for improved and efficient work flows.

Additionally, the touch screen computer, which uses a Windows operating system, is wireless network capable and has a 500 GB hard drive to store large amounts of images, templates and data. There are 7 USB ports for the use of additional accessories such as a keyboard and mouse, adding to the unit's user-friendliness. A stylus is included for simple and precise control.

Designed for convenient benchwork.

The Slide2Hide door features an ergonomic design, with smooth operation that limits bench-top interference, when tucked beneath the darkroom. Access to the interior of the darkroom is easy and unintrusive.

- Long-life UV lamp technology for minimum service requirements, independent of the number of times the transilluminator is turned on/off
- UV lamps are instant-on, with no need to warm-up
- A UV intensity switch with low and high settings is included, to provide optimal UV radiation for gel documentation or for preparative work

Expand your range of applications with modular lighting options

The UVP ChemStudio PLUS imagers expand to perform an even wider range of applications with the addition of accessories. Overhead white, green, red and blue LEDs come as standard in the series, and optional UV lamps can be installed in the system to provide overhead UV illumination to support excitation ranges from 250-800nm. Furthermore, overhead NIR modules are available that can be upgraded in the field. These allow for a range of multiplex lighting for IR1, and IR2.

UV Protection is a Priority

An integrated UV Protection Shield, maximizes protection from UV radiation, when working over the transillumination surface while the darkroom door is open.

The UV Protection Shield is neatly stowed away and there is no need for a separate storage location. It is easily pulled down for immediate use and can be set at a custom angle according to user needs. When the Thin-Line Transilluminator is rolled out, the shield protects users from UV while performing preparative work on gels. Additionally, the systems are equipped with a red "UV On" indicator light to alert users to the presence of UV light.

- Protected when working over the transilluminator surface
- The angle of the shield can be freely adjusted according to user needs
- Side angle design shields nearby personnel from UV radiation
- Convenient red UV "On" indicator light

VisionWorks® Software

All versions of the UVP ChemStudio and UVP ChemStudio PLUS series imagers are operated by VisionWorks® software. This guarantees powerful capture, quantitating and analysis.

Automation based on applications

Application-based template icons come preset and preloaded for common experiments in chemiluminescence, fluorescence and visible fluorescence.

One click to switch to picture or expert mode

The software lets users create custom one-click application icons so that they can switch with ease from sample to picture mode or to full-control expert mode.

One-touch workflows for drastically improved laboratory efficiency

For more complex application workflows, macros are used to automate several workflow actions so that they can be activated by one touch.

Additionally, user accounts can easily be set up with passwords to save and protect user data.

Extensive image enhancement and analysis tools

Image enhancement and analysis features are included with all systems. Researchers can personalize their experiments and make use of enhancement features and annotation tools, e.g., for publication purposes. The software offers many powerful tools such as noise reduction, background subtraction, inversion, pseudocolor, compositing and more.

The extensive analysis features are optimized for accurate and reproducible results. Several custom tools are available, such as: finding lanes and bands, 1D analysis, area density and colony counting. Once the quantitation results have been generated, reports are created to show thorough analysis such as Molecular Weight (MW), Rf, band intensities and area density calculations. All data can be conveniently exported to Excel.

Complete Life Science Workflow Solutions

The Life Science portfolio of Analytik Jena offers quality and reliability enabling years of laboratory use. Simplifying your daily work in molecular biology research.

Sample preparation

- Innovative solutions for manual and automated nucleic acid extraction
- Patented chemistry and unique technologies
- Powerful thermal shaking and homogenization
- Nano-volume spectral photometer

Liquid handling and easy PCR setup

- Clean environment for optimal PCR and qPCR preparation
- Flexible pipetting robots meet the need of each individual application
- Perfect solutions from low to high throughput

Reliable detection

- More than 30 years experience in PCR thermal cycling
- Patented real-time PCR technology with 10 years long-term warranty
- Modern gel documentation and chemiluminescence
- Full product range with aligned reagents

Starting material

Homogenizing
